

DYNAMIC INSTRUMENTS

COURIER™ for Reliant

Remote PC Retrieval & Playback Software

Enhanced **COURIER™** for Reliant — the most powerful remote monitoring, event reconstruction and audio distribution tool available!

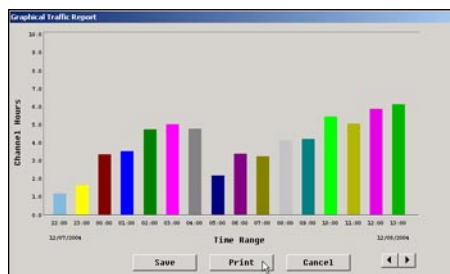

Live monitoring from the convenience of a remote work-station is a breeze. Users can quickly monitor multiple channels, retrieve, review, duplicate and distribute recorded transmissions.

Scenario reconstruction and distribution has never been easier. One event, recorded over multiple channels, saved together as one record - It's that simple! Users can easily highlight multiple channels, select multiple records and save it to one file in WAV, MP3 or

WMA format. The files can be saved with or without silent periods and users can authenticate copies with a date and time stamp. There's even more.

Evaluation and assessment is quick and easy using the built-in reporting features. Courier's colorful graphics and reports provide a comprehensive image of call volume and recording activity.

COURIER™ for Reliant,
bringing audio to your desktop!
